-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 04 January 2008.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-9 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-9 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☒ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SF/ICE)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Priority

1. A certified English translation of the foreign priority document has been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

Claim Rejections - 35 USC § 103

2. The rejections under 35 U.S.C. 103(a) based on JP 2003-138165 (JP '165) has been withdrawn in view of the certified English translation of the foreign priority document establishing a priority date of 08/23/2002.

3. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over:

JP 06-107750 (JP '750),

in view of JP 08-034860 (JP '860),

JP '750 discloses a molded polyolefin substrate coated with a coating composition comprising the recited components (a), (b), (c) as recited in claim 1 and which optionally contains an isocyanate-group containing component, wherein the curable coating is applied to the substrate and cured via conventional in-mold coating methods. (JP '750, entire document, e.g., Abstract; paragraphs 3-5, 7, 11, 13-15, etc.) However, the reference does not explicitly disclose the recited hydroxyl-group containing polypropylene composition.

JP '860 discloses that it is well known in art to use polypropylene molding compositions comprising a 10-99.9 parts by weight (pbw) hydroxyl-group containing polypropylene

Art Unit: 1794

containing a hydroxyl content less than 50 meq/g, 0.1-90 pbw olefin-based elastomer (e.g., ethylene- α -olefin copolymers), and optionally up to 500 pbw of an additional polymer component and up to 40 wt% filler (e.g., inorganic fibers, etc.), in order to improve the coatability of molded polyolefin substrates. (JP '860, entire document, e.g., paragraphs 7, 9, 21-22, 31-33, etc.)

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to utilize a polypropylene molding composition with desirable adherent properties as disclosed in JP '860 as the substrate for the coated articles as disclosed in JP '750 in order to improve intercomponent adhesion.

4. Claims 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over:

JP 06-107750 (JP '750), in view of JP 08-034860 (JP '860),

as applied to claim 1 above,

and further in view of STRAUS ET AL (US 6,617,033),

and in view of YOMEMOCHI ET AL (US 6,180,043) or EP 0 934 808 (EP '808).

STRAUS ET AL discloses that it is well known in the art to apply a curable in-mold coating to a thermoplastic substrate in a two-part mold as recited in claims 7-9, wherein the method comprises a filling stage comprising injecting molten thermoplastic composition having a typical initial melt temperature of 400-500°F into a mold having a typical mold temperature of 200-250°F at a first injection pressure, followed by a packing stage comprising increasing the injection pressure, followed by a cooling stage, followed by partial opening of the mold, injection of a fluent coating composition having a typical curing temperature of 200-330°F,

reclosing and increasing the clamping pressure on the mold to cure the coating on the substrate.
(entire document, e.g., Figure 1; line 18, col. 10 to line 6, col. 11; line 15-19, col. 12; etc.)

YOMEMOCHI ET AL '043 and JP '808 disclose that it is well known in the art to allow a molded substrate to cool and solidify sufficiently to withstand the injection of the fluent coating composition prior to the injection of a fluent coating composition, followed by reclosing and increasing the clamping pressure on the mold to cure the coating on the substrate.
(Abstract; line 24-45, col. 3; line 31-40, col. 4)

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to utilize known in-mold coating methods to apply the coatings of JP '165 to polypropylene in order to produce a coated article with improved intercomponent adhesion. Since the clamping pressure must counteract the injection pressure in order to hold the mold closed, an increase in injection pressure (e.g., during the packing stage) requires a corresponding increase in clamping pressure. It is conventional to set the mold temperature below the melting point of the molding resin in order to allow solidification of thermoplastic resins. One of ordinary skill in the art would have set the mold temperature above the curing temperature of the coating composition in order to allow adequate curing and solidification of the coating composition. It would have been obvious to use conventional molding techniques (e.g., degassing the mold via an controlled opening, etc.) (claim 9) in order to facilitate thorough filling of the mold and improve the surface finish of the molded article.

Response to Arguments

5. Applicant's arguments filed 1/4/2007 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vivian Chen whose telephone number is (571) 272-1506. The examiner can normally be reached on Monday through Thursday from 8:30 AM to 6 PM. The examiner can also be reached on alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Milton Cano, can be reached on (571) 272-1398. The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8300.

The General Information telephone number for Technology Center 1700 is (571) 272-1700.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

March 28, 2008

/Vivian Chen/
